

# How to create a Rescue Media ISO image file

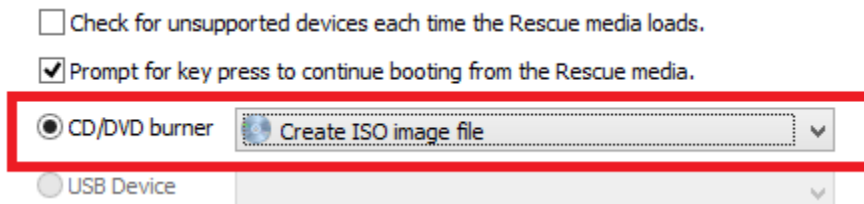

If you have problems burning optical media with the built-in Macrium Reflect optical media burning engine then you can easily create a standard ISO format image file that can be used with any DVD/CD burning software to create your rescue media,

In the rescue media wizard final page:

The screenshot shows the 'Burn Rescue Media' step of the Macrium Reflect Rescue Media Wizard. The title bar says 'Rescue Media Wizard'. The main heading is 'Burn Rescue Media' with the instruction 'Choose your optical/USB device and click finish.' Below this, a CD icon is shown next to the version information: Version: 6.0.440, Date: 27/01/2015, and Type: Auto-built Windows PE 5.0 (WADK) - 64 Bit. A 'Rebuild' button is present. There are two checked checkboxes: 'Check for unsupported devices each time the Rescue media loads.' and 'Prompt for key press to continue booting from the Rescue media.' Under the 'CD/DVD burner' radio button, a dropdown menu is open showing 'Create ISO image file'. The 'USB Device' radio button is also visible with a dropdown showing '(F: ) - Generic-xD/SD/M.S. (982.5 MB)'. There are two more unchecked checkboxes: 'Enable multiboot MBR/UEFI USB support. Recommended for your system.' and 'Create a Technician's USB Drive with portable application support.' At the bottom, it says 'Please press **Finish** button to continue.' and there are four buttons: '< Back', 'Next >', 'Cancel', and 'Finish'.

Click the 'CD/DVD' burner combo-box and select 'Create ISO Image file'.

This is a close-up of the 'CD/DVD burner' section of the wizard. It shows the 'CD/DVD burner' radio button selected. The dropdown menu is open, and 'Create ISO image file' is highlighted. A red rectangle is drawn around the 'CD/DVD burner' radio button and the dropdown menu to indicate the selection point.

You can then use most DVD burning software, such as the free [ImgBurn](#) to create your physical media.
