

Windows Explorer shell extensions missing

After an in-place upgrade to Windows 10 you may notice that the Macrium Reflect Windows Explorer context menus and/or shell extensions are missing. For more information on Windows Explorer integration please see here: [Windows Explorer shell integration](#)

To resolve this issue please follow the steps below:

1. Start an elevated command prompt. See [Running an elevated command prompt](#) for more information.
2. Type the following command:

```
CD "c:\program files\macrium\reflect"  
regsvr32 RContextMenu.dll  
regsvr32 RShellEx.dll
```

Please replace "C:\Program Files\Macrium\Reflect" with the correct path if installed to a different folder.

3. Restart your PC

The Macrium Reflect Shell extensions will now be available.
