

Adding a boot menu option for Reflect recovery

Adding a Macrium Reflect Windows boot menu enables direct access to the Macrium Windows PE recovery environment without the need to burn a DVD or USB Flash drive.

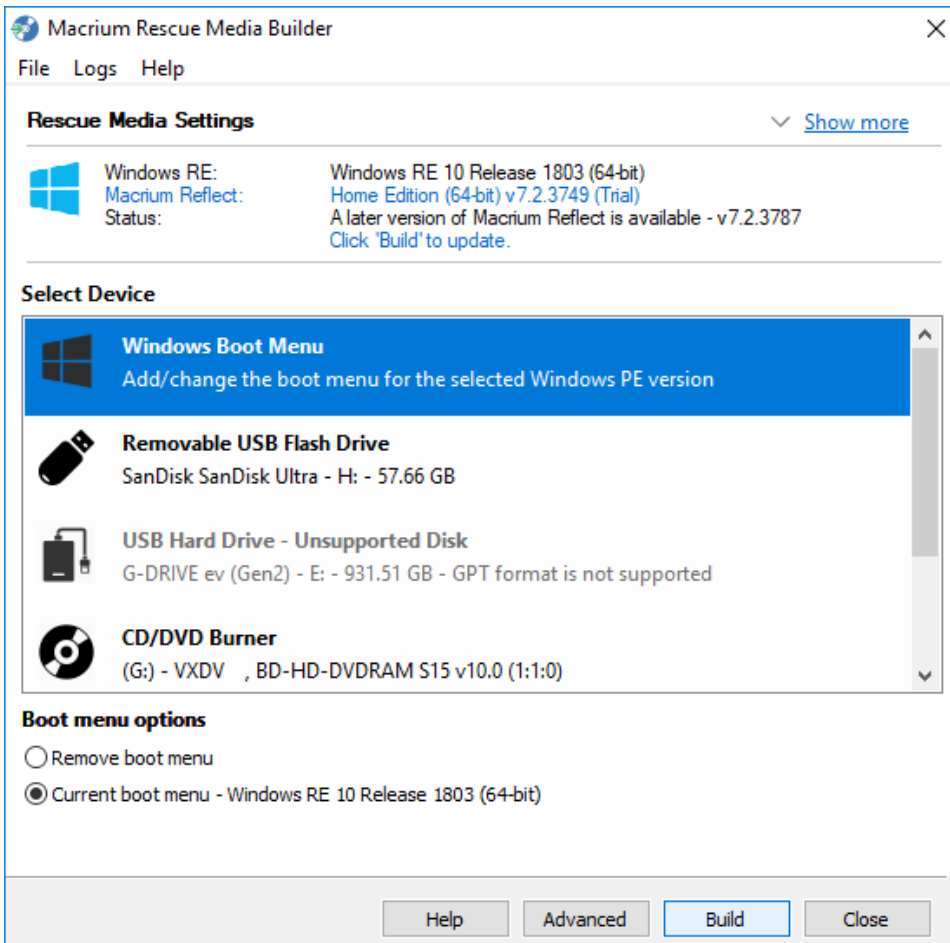

Note: You are advised to create physical boot media, USB or DVD, that can be used if your OS system disk fails.

You can add a **Macrium Reflect System Recovery** menu option to your PC boot menu. By doing this you can restore a system image (the C drive) without a recovery CD.

1. Take the 'Other Tasks' > 'Create Rescue Media...' menu option

2. Select 'Windows Boot Menu' in the device list and click 'Build'

The Macrium recovery boot menu option - Windows 10
